

This is a regular paragraph of body text.
It precedes a code block to ensure we detect the transition.
We can also call `parse()` inline.

```
def fibonacci(n):  
    if n <= 1:  
        return n  
    return fibonacci(n-1) + fibonacci(n-2)
```

This is a second paragraph of body text.
It confirms the code block detection ends correctly.
